nationally and internationally with potential to secure roles in development, construction and building companies or government organisations and agencies, as well as commercial, management and consultancy firms.

Safety is an ongoing project

management issue for all construction managers. By its very nature, construction work is inherently dangerous and carries a degree of risk (Love et al., 2016). The number of accidents emanating from construction projects is high, in terms of both loss of life and costs (Hughes & Ferrett,

2015).

In brief, construction project management is the process of managing construction projects. But when you're talking about managing a construction project in comparison to other types of projects, the distinction is mostly that construction is mission-

*Page 4/116*

based. That means that the project's organization ends with the end of the project build.
