*Cpt Code For Bleeding Tonsils Skmnx3*  
While bleeding tonsils for no reason is uncommon (and should be checked by a doctor), a little bit of bleeding during or after the removal of tonsil stones is completely normal and very common. Tonsils are soft, fleshy tissue masses located near the back of the throat. They are quite fragile, making them easy to irritate and damage.

*Bleeding after Tonsillectomy: When Is It an Emergency?*  
Tonsillectomy is a surgical procedure in which both palatine tonsils are fully removed from the back of the throat. The procedure is mainly performed for recurrent throat infections and obstructive sleep apnea (OSA). For those with frequent throat infections, surgery results in fewer sore throats in the following one to two years, but unclear long term benefits.
