Networking IPv6 User Guide for JDK/JRE 5.0. This document covers the following topics: Overview; ... (kernel 2.4.0 and higher recommended for better IPv6 support) Windows XP SP1 and Windows 2003; Using IPv6 in Java ... the IPv6 socket communicates with an IPv4 peer through an IPv4-mapped IPv6 address. However, unless a socket checks for the ...

Networking IPv6 User Guide - Oracle

Socket address structure passed from kernel to application. These are the three kind of operations to be changed in the source code. There are some examples below of these types of operation. Creating a socket The difference between creating an IPv4 and an IPv6 socket is the value of the family argument in the socket call. IPv4 source code:

Porting applications to IPv6 HowTo

Microsoft Windows Server 2003 introduces new Windows Sockets programming elements. These elements extend the capability of Winsock to simplify programming and provide IPv6 compatibility. For more information about porting Winsock applications to IPv6, see IPv6 Guide for Windows Sockets Applications. The following are new Windows Sockets functions:

What's New for Windows Sockets - Win32 apps | Microsoft Docs

The Server Example . The server side is a bit more involved than the client side. This is because the Windows IPv6 stack is a dual stack. That is, there is a separate stack for IPv4 and IPv6, so if a server wishes to accept both IPv4 and IPv6 connections, it must create a socket for each one.

The Server Example - winsocketdotnetworkprogramming.com

Hi, I am writing a client/server application which should accept both ipv4 and ipv6 connections. Currently I am listening for connections on two seperate sockets (one for ipv4 and one for ipv6) as shown in the code below. I was just wondering if this is the best way to go about this? or is there a way I can configure a single socket to listen for both?
