This open access book identifies the multiple ways that IEA's studies of civic and citizenship education have contributed to national and international educational discourse, research, policymaking, and practice. The IEA International Civic and Citizenship Education Study (ICCS), first conducted in 2009, was followed by a second

cycle in 2016. The project was linked to the earlier IEA Civic Education Study (CIVED 1999, 2000). IEA's ICCS remains the only large-scale international study dedicated to formal and informal civic and citizenship education in school. It continues to make substantial contributions to understanding the nature of the acquired civic knowledge, attitudes, and participatory skills. It also discusses in-depth how a wide range of countries prepare their young people for citizenship in changing political, social, and economic circumstances. The next cycle of ICCS is planned for 2022. In this book, more than 20 national representatives and international scholars from Europe, Latin America, Asia, and North America assess how the processes and findings of the 2009 and 2016 cycles of ICCS and CIVED 1999/2000 have been used to improve nations' understanding of their students' civic knowledge, beliefs, attitudes, current civic-related behaviors, and intentions for future participation in a comparative context. There are also chapters summarizing the secondary analysis of those studies' results indicating their usefulness for educational improvement and reflecting on policy issues. The analyses and reflections in this book provide timely insight into international educational discourse, policy, practice, and research in an area of education that is becoming increasingly important for many societies.

This publication introduces the Diagnose-and-Supplement System of Basic Skills (DASOBS), an online-offline system for academically low-achievement students from grades 1 to 10 in the Republic of Korea. It outlines the purpose, features, and history of DASOBS and describes the pipeline, content, and operations of the system. DASOBS, which involves form-based adaptive testing, is administered four times a year, with supplemental materials provided so that students can study subjects and lessons according to their achievement levels. This publication also presents policy implications of DASOBS in the education sector. It will be useful for policymakers, educators, and other stakeholders, especially those seeking to increase targeted support for academically underachieving students.

*Where is U.S. secondary-level science education heading today? That's the question that *The Essentials of Science, Grades 7-12* sets out to answer. Over the last century, U.S. science classes have consistently relied on lectures, textbooks, rote memorization, and lab demonstrations. But with the onset of NCLB-mandated science testing and increased concern over the United States' diminishing global stature in science and technology, public pressure is mounting to educate students for a deeper conceptual understanding of science. Through lively examples of classroom practice, interviews with award-winning science teachers and science education experts, and a wide-ranging look at research, readers will learn*

- * How to make use of research within the cognitive sciences to foster critical thinking and deeper understanding.*
- * How to use backward design to bring greater coherence to the curriculum.*
- * Innovative, engaging ideas for implementing scientific inquiry in the classroom.*
- * Holistic strategies to address the complex problems of the achievement gap, equity, and resources in the science classroom.*
- * Strategies for dealing with both day-to-day and NCLB assessments.*
- * How professional learning communities and mentoring can help teachers reexamine and improve their practice.*
