

React Js Web Application Development Traininghott

React is a JavaScript library for building user interfaces. It is maintained by Facebook and a community of individual developers and companies. React can be used as a base in the development of single-page or mobile applications. However React is only handling rendering of data and so creating React applications usually require the use of additional libraries for state management, routing, and interaction with an API. Redux, React Router and axios are respective examples of such libraries. React components wrap existing native code and interact with native APIs via React's declarative UI paradigm and JavaScript. This enables native app development for whole new teams of developers, and can let existing native teams work much faster.

Tutorial: Intro to React – React - React - A JavaScript ...

React JS efficiently manages the view layer of mobile and web apps. Moreover, as a lot of JavaScript frameworks and libraries are currently dominating the development arena, React Js emerges as one of the most adopted and used JavaScript framework, which deals with View in MVC. History of React JS
