In order for our model to be in third normal form, we need to remove the transitive dependencies. As we stated our dependency is: CustomerCity relies on CustomerPostalCode which relies on CustomerID. It is OK that CustomerPostalCode relies on CustomerID; however, we break 3NF by including CustomerCity in the table.

I was reading through SQL in easy steps, 3rd Edition and made it to page 152 where it covered Sub-query calculated fields. It's a fancy way of saying a SELECT statement within a SELECT statement , but isn't that hard to grasp if you're familiar with how variable interpolation works with Bash or similar shells.
